2024年全国硕士研究生招生考试

英语（一）

（科目代码：201）

☆考生注意事项☆

1. 答题前，考上须在试题册指定位置上填写考生编号和考生姓名；在答题卡指定位置上填写报考单位、考生姓名和考生编号，并涂写考生编号信息点。
2. 考生须把试题册上的“试卷条形码”粘贴条取下，粘贴在答题卡的“试卷条形码粘贴位置”框中。不按规定粘贴条码而影响评卷结果的，责任由考生负责。
3. 选择题的答案必须涂写在答题卡相应题号的选项上，非选择题的答案必须书写在答题卡指定位置的边框区域内。超出答题区域书写的答案无效；在草稿纸、试卷册上答题无效。
4. 填（书）写部分必须使用黑色字迹签字笔书写，字迹工整、笔迹清晰；涂写部分必须使用2B铅笔填涂。
5. 考试结束。将答题卡和试题册按规定交回。

（以下信息考生必须认真填写）

考研英语一试题

Section I Use of English

Directions:

Read the following text. Choose the best word(s) for each numbered blank and mark A. B. C or D on the ANSWER SHEET. (10 points)

There's nothing more welcoming than opening a door for you. __1.__ the need to be touched to open or close, automatic doors are essential in __2.__ disabled access to buildings and helping provide general __3.__ to commercial buildings.

Self-sliding doors began to emerge as a commercial product in 1960 after being invented six years __4.__ by two Americans Dee Horton and Lew Hewitt. They __5.__ as a novelty feature, but as their use has grown. their __6.__ have extended within our technologically advanced world. Particularly __7.__ in busy locations and during times of emergency, the doors __8.__ crowd management by reducing the obstacles put in people's way.

__9.__ making access both in and out buildings easier for people, the difference in the way many of these doors open helps to reduce the total area __10.__ by them. Automatic doors often open to the side, with the panels sliding across one another Replacing swing doors, these __11.__ smaller buildings to maximise the usable space inside without having to __12.__ the way for a large, sticking-out door. There are many different types of automatic door, with each __13.__ specific signals to tell them when to open. __14.__ these methods differ, the main __15.__ remain the same.

Each automatic door system __16.__ the light, sound weight or movement in their vicinity as a signal. Sensor-types are chosen to __17.__ the different environments they are needed in. __18.__ a busy road might not __19.__ a motion-sensored door, as it would constantly be opening for passers-by. A pressure-sensitive mat would be more __20.__ to limit the surveyed area.

1. [A] Though	[B] Despite	[C] Besides	[D] Without
2. [A] revealing	[B] demanding	[C] improving	[D] tracing
3. [A] experience	[B] convenience	[C] guidance	[D] reference
4. [A] previously	[B] temporarily	[C] successively	[D] eventually

5. [A] held on	[B] started out	[C] settled down	[D] went by
6. [A] relations	[B] volumes	[C] benefits	[D] sources
7. [A] useful	[B] simple	[C] flexible	[D] stable
8. [A] call for	[B] yield to	[C] insist on	[D] act as
9. [A] As well as	[B] In terms of	[C] Thanks to	[D] Rather than
10. [A] connected	[B] shared	[C] represented	[D] occupied
11. [A] allow	[B] expect	[C] require	[D] direct
12. [A] adopt	[B] lead	[C] clear	[D] change
13. [A] adapting to	[B] deriving from	[C] relying on	[D] pointing at
14. [A] Once	[B] Since	[C] Unless	[D] Although
15. [A] records	[B] positions	[C] principles	[D] resources
16. [A] controls	[B] analyses	[C] produces	[D] mixes
17. [A] decorate	[B] compare	[C] protect	[D] complement
18. [A] In conclusion	[B] By contrast	[C] For example	[D] Above all
19. [A] identify	[B] suit	[C] secure	[D] include
20. [A] appropriate	[B] obvious	[C] impressive	[D] delicate

Section II Reading Comprehension

Part A

Directions:

Read the following four texts. Answer the questions below each text by choosing A. B. C. or D. Mark your answers on the ANSWER SHEET. (40 points)

Text 1

Nearly 2000 years ago, as the Romans began to pull out of Scotland, they left behind a curious treasure:10 tons of nails, nearly a million of the things. The nail hoard was discovered in 1960 in a four- metre- deep pit covered by two metres of gravel.

Why had the Romans buried a million nails? The likely explanation is that the withdrawal was rushed, and they didn't want the local Caledonians getting their hands on 10 tons of weapons grade iron. The Romans buried the nails so deep that they would not be discovered for almost two millennia.

Later civilizations would value the skilled blacksmith's labour in a nail even more than the raw material. As Roma Agrawal explains in her new delightful book Nuts and Bolts, early 17th-century Virginians would sometimes burn down their homes if they

were planning to relocate. This was an attempt to recover the valuable nails, which could be reused after sifting the ashes. The idea that one might burn down an entire house just to reclaim the nails underlines how scarce, costly and valuable the simple-seeming technology was.

The price of nails fell by 90% between the late 1700s and mid-1900s. as economist Daniel Sichel points out in a research paper. According to Sichel, although the falling price of nails was driven partly by cheaper iron and cheaper energy, most of the credit goes to nail manufacturers who simply found more efficient ways to turn steel into nails.

Nails themselves have changed over the years. but Sichel studied them because they haven't clanged much. Roman lamps and Roman chariots are very different from LED strips and sports cars, but Roman nails are still clearly nails. It would be absurd to try to track the changing price of sports cars since 1695, but to ask the same question of nails makes perfect sense.

I make no apology for being obsessed by a particular feature of everyday objects: their price. I am an economist, after all. After writing two books about the history of inventions, one thing I've learnt is that while it is the enchantingly sophisticated technologies that get all the hype. it's the cheap technologies that change the world.

The Gutenberg printing press transformed civilisation not by changing the nature of writing but by changing is cost - and it would have achieved limit without a parallel collapse in the paper of surfaces to write on, thanks to an with oven looked technology called apor Solar panels had a few niche uses until they became cheap; now they are transforming the global energy system.

21.Romans buried the nails probably for the sake of_____.

[A] saving them for future use

[B] keeping them from rusting

[C] letting them grew in value

[D] hiding them from locals

22.The example of early 17th-century Virginians is used to_____.

[A] highlight the thriftiness of early American colonists

[B] illustrate the high status of blacksmiths in that period

[C] contrast the attitudes of different civilizations toward nails

[D] show the preciousness of nail-making technology at that time

23. What played the major role in lowering the price of nail after the late 1700?

[A] Increased productivity

[B] wider use of new energies

[C]Fierce market competition

[D] reduced cost of raw material

24. It can be learned from Paragraph 5 that nails_____.

[A] have undergone many technological improvements

[B] have remained basically the same since Roman times

[C] are less studied than other everyday product

[D] are one of the world's most significant inventions

25. Which of the following one best summaries the last 2 paragraphs?

[A] cheap technologies bring about revolutionary change

[B] technological innovation is integral to economic success

[C] technology defines people's understanding of the world

[D] Sophisticated technology developed small inventions

Text 2

Parenting tips obtained from hunter-gatherers in Africa may be the key to bringing up more contented children, researchers have suggested. The idea is based on studies of communities such as the Kung of Botswana . where each child is cored of by many adults Kung children as young as four will help to look after younger ones and "baby-wearing ", in which infants are carried in slings, is considered the norm.

According to Dr Nikhil Chaudhary, an evolutionary anthropologist at Cambridge University. these practices, knows as alloparenting, could lead to less anxiety for children and parents.

Dr Annie Swanepoel, a child psychiatrist, believes that there are ways to incorporate them into western life. In Germany, one scheme has paired an old people's home with a nursery. The residents help to look after the children, an arrangement akin to alloparenting. Another measure could be encouraging friendships between children in different school years to mimic the super vised mixed-age play groups in hunter-gatherer communities.

In a paper published in the *Journal of child Psychology and Psychiatry*,

researchers said that the western nuclear family was a recent invention which broke with evolutionary history. This abrupt shift to an "intensive mothering narrative" which suggests that mothers should manage child care alone, was likely to have been harmful. "Such narratives can lead to maternal exhaustion and have dangerous consequences. " they wrote.

By contrast, in hunter-gatherer societies adults other than the parents can provide almost half of a child's care. One previous study looked at the people of the Democratic Republic of Congo. It found that infants had an average of 14 all parents a day by the time they were 18 weeks old and were passed between care givers eight times an hour.

Chaudhary said that parents now had less child care support from family and social networks than during most of humans evolutionary history, but introducing additional caregivers could reduce stress and maternal depression, which could have a"knock-on" benefit to child's wellbeing. And infant born to a hunter- gatherer society could have more than ten caregivers -this contrasts starkly to nursery setting in the UK where regulation can for a ratio of one carer to four children aged two to three.

While hunter-gatherer children learn from observation and imitation in mixed-age playgroups, researchers said that western "instructive teaching", where pupils are asked to sit still. many contribute to conditions such as attention deficit hyperactivity disorder. Chaudhary said that Britain should explore the possibility that older siblings helping their parents might also enhance their own social development.

26. According to the first two paragraphs, alloparenting refers to the practice of_____.
[A] sharing childcare among community members
[B] assigning babies to specific adult categories
[C] teaching parenting skills to older children
[D] carrying infants around by their parents

27. The scheme in Germany is mentioned to illustrate_____.
[A] an attempt to facilitate intergenerational communication
[B] an approach to integrating into western society
[C] the conventional parenting style in western culture
[D] the differences between western and African ways of living

28. According to paragraph 4, the “intensive mothering narrative_____.

[A] alleviates parenting pressures
[B] consolidates family relationships
[C] results in the child-centered family
[D] departs from the course of evolution

29. what can be inferred about the nurseries in the UK?
[A] They tend to fall short of official requirements.
[B] They have difficulty finding enough caregivers.
[C] They ought to improve their career-to-child ratio.
[D] They should try to prevent parental depression.

30. Which of the following would be the best title for the text?
[A] Instructive teaching: a dilemma for anxious parents
[B] For a happier family learn from the hunter gatherers
[C] Mixed-aged playgroup. a better choice for lonely children
[D] Tracing the history of parenting: from Africa to Europe

Text 3

Rutkowski is a Polish digital artist who uses classical painting styles to create dreamy fantasy landscapes. He has made illustrations for games such as Sony's Horizon Forbidden West, Ubisoft's Anno, Dungeons & Dragons, and Magic: The Gathering. And he's become a sudden hit in the new world of text-to-image AI generation.

His distinctive style is now one of the most commonly used prompts in the new open-source AI art generator Stable Diffusion, which was launched late last month. The tool, along with other popular image-generation AI models, allows anyone to create impressive images based on text prompts. For example, type in "Wizard with sword and a glowing orb of magic fire fights a fierce dragon Greg Rutkowski." and the system will produce something that looks not a million miles away from works in Rutkowski's style.

But these open-source programs are built by scraping images from the Internet, often without permission and proper attribution to artists. As a result, they are raising tricky questions about ethics and copyright. And artists like Rutkowski have had enough.

According to the website Lexica, which tracks over 10 million images and

prompts generated by Stable Diffusion, Rutkowski's name has been used as a prompt around 93,000 times. Some of the world's most famous artists. such as Michelangelo, Pablo Picasso, and Leonardo da Vinci, brought up around 2,000 prompts each or less. Rutkowski's name also features as a prompt thousands of times in the Discord of another text-to-image generator. Midjourney. Rutkowski was initially surprised but thought it might be a good way to reach new audiences. Then he tried searching for his name to see if a piece he had worked on had been published. The online search brought back work that had his name attached to it but wasn't his.

"It's been just a month. What about in a year? I probably won't be able to find my work out there because [the internet] will be flooded with AI art. " Rutkowski says. "That's concerning. "

"There is a coalition growing within artist industries to figure out how to tackle or mitigate this. says Ortiz. The group is in its early days of mobilization, which could involve pushing for new policies or regulation. One suggestion is that AI models could be trained on images in the public domain, and AI companies could forge partnerships with museums and artists, Ortiz says.

31. what can be learned about Rutkowski from the first two paragraphs?
[A] He is enthusiastic about using AI models.
[B] He is popular with user of an AI art generator.
[C] He attracts admiration tram other illustrators.
[D] He specializes in classical painting digitalization.

32. The problem with open - source AI art generators is that they_____.
[A] lack flexibility in responding to prompts
[B] produce artworks in unpredictable styles
[C] make unauthorized use of online images
[D] collect user information without consent

33. After searching online, Rutkowski found_____.
[A] a unique way to reach audiences
[B] A new method to identity AI images
[C] AI-generated work bearing his name
[D] heated disputes regarding his copyright

34. According to Ortiz, AI companies are advised to _____.

[A] campaign for new policies or regulation

[B] offer their services to public institutions

[C] strengthen their relationship with AI users

[D] adopt a different strategy for AI model training

35. What is the text mainly about?

[A] Artists' responses to AI art generation

[B] AI's expanded role in artistic creation

[C] Privacy issues in the application of AI

[D] Opposing views on AI development

Text 4

The miracle of the Chesapeake Bay lies not in its depths, but in the complexity of its natural construction. the interaction of fresh and saline waters. and the mix of land and water. The shallows provide homes for hundreds of species while storing floodwaters, filtering pollutants from water. and protecting nearby communities from potentially destructive storms urges.

All this was put at great risk late last month, when the U. S. Supreme Court issued a ruling in an Idaho case that provides the U. S. Environmental Protection Agency (EPA) far less authority to regulate wetlands and waterways. Specifically, a 5-4 majority decided that wetlands protected by the EPA under its Clean Water Act authority must have a "continuous surface connection to bodies of water. " This narrowing of the regulatory scope was a victor for builders. mining operators and other commercial interests often at odds with environmental rules. And it carries "significant repercussions for water quality and flood control throughout the United States. " as Justice Brett Kavanaugh observed.

In Maryland, the good news is that there are many state laws in place that provide wetlands protections. But that's a very shortsighted view, particularly when it comes to the Chesapeake Bay. The reality is that water. and the pollutants that so often come with it, don't respect state boundaries. The Chesapeake draws from a 64,000-square-mile watershed that extends into Virginia. Pennsylvania. New York, West Virginia. the District of Columbia and Delaware. Will those jurisdictions extend the same protections now denied under Sackett V. EPA? Perhaps some, but all? That seems unlikely.

It is too easy, and misleading, to see such court rulings as merely standing up for the rights of land owners when the consequences can be so dire for their neighbors. And it's are minder that the EPA's involvement in the Chesapeake Bay Program has long been crucial as the means to transcend the influence of deep-pocketed special interests in neighboring states Pennsylvania farmers, to use one telling example, aren't thinking about next year's blue crab harvest in Maryland when they decide whether to spread animal waste on their field, yet the runoff into nearby creeks can have enormous impact downstream.

And so we would call on state lawmakers from Richmond to Albany to consider reviewing their own wetlands protections and see for themselves the enormous stake!involved. We can offer them a visit to Black water National Wildlife Refuge in Dorchester County where bald eagles fly over tidal marshes so shallow you could not paddle a boat across them but teaming with aquatic life. It's worth the scenic drive.

36. The Chesapeake Bay is described in paragraph 1 as_____.
[A] a valuable natural environment
[B] a controversial conservation area
[C] a place with commercial potential
[D] a headache for nearby communities

37. The U. S. Supreme Court's ruing in the Idaho case_____.
[A] reinforces water pollution control
[B] weakens the EPA's regulatory power
[C] will end conflicts among local residents
[D] may face opposition from mining operators

38. How does the author fell about future of the Chesapeake Bay?
[A] worried
[B] Puzzled
[C] Relieved
[D] Encouraged

39. What can be inferred about the EPA's involvement in the chesapeake Bay Program?
[A] It has restored the balance among neighboring jurisdictions.

[B] It has triggered a radical reform in commercial fisheries.
[C] It has set a fine example of respecting state authorities.
[D] It has ensured the coordination of protection efforts.

40. The author holds that the state lawmakers should_____.
[A] be cautious about the influence of landowners
[B] attach due importance to wetlands protections
[C] recognize the need to expand wildlife refuges
[D] improve the wellbeing of endangered species

Part B

Directions: Choose the best statement from the list A-G for each numbered name (41-45). There are two extra choices which you do not need to use. Mark your answers on the ANSWER SHEET. (10 points)

41. Hannah

Simply there are people in Nigeria who cannot travel to the Smithsonian Institution to see that part of their history and culture represented by the Benin Bronzes. These should be available to them as part of their cultural heritage and history and as a source of national pride. These is no good reason that these artifacts should be beyond the ordinary reach of the educational objectives or inspiration of the generations to which they were left. They serve no purpose in a museum in the United States or elsewhere except as curious objects. They cannot be compared to works of art produced for sale which can be passed from hand to hand and place by purchase.

42. Buck

We know very exact reproductions of artwork can be and are regularly produced. Perhaps museums and governments might explore some role for the use of nearly exact reproductions as a means of resolving issues relating to returning works of art and antiquities. The context of any exhibit is more important to me than whether the object being displayed is 2000 years old or 2 months old. In many cases the experts have a hard time agreeing on what is the real object and what is a forgery. Again, the story an exhibit is trying to tell is what matters. The monetary value of the object on display is a distant second place in importance.

43. Sara

When visiting the Baltimore Museum of Art, I came across a magnificent 15th-century Chinese sculpture. It inspired me to learn more about the culture that it represented. Artifacts in museums have the power to inspire. and perhaps spark that need to learn and understand the nature of their creators. Having said that. I do feel that whatever artifacts find their way to public museum should, in fact, be sanctioned as having been obtained on loan, legally purchased or obtained by treaty. Stealing artifacts from other peoples' cultures is obscene;it robs not only the physical objects, but the dignity and spirit of their creators.

44. Victor

Ancient art that is displayed in foreign countries by all means should be returned to the original country. The foreign countries have no right to hold back returning the items. I would ask that the foreign nations and the original country discuss the terms of transfer. Yes, there is the risk that the original will not have as good security as do the foreign-countries. But look at what happened to Boston's Gardner Museum theft in 1990, including the loss of Rembrandt Vermeer, Manet and other masterpiece. Nothing is absolutely safe nowhere, and now Climate Change agitators are attacking publicly displayed work in European museum.

45. Julia

To those of you in the comments section who are having strong feelings about artifacts being removed from cities in the US and Britain and returned to their countries of origin. I would ask you to consider:why do you think Americans have more of a right to easily access the Benin Bronzes than people of Nigeria?Why are people who live within a days drive of London entitled to go and see the Elgin Marbles wherever they want. but the people of Athens aren't?What intrinsic factors make the West a suitable home for these artifacts but preclude them from being preserved and displayed by their countries of origin? If your conclusion is that the West is better able to preserve these artifacts, think about why you're assuming that to be true.

[A] It is clear that the countries of origin have never been compensated for the stolen artifacts.

[B] It is a flawed line of reasoning to argue against returning artifacts to their countries of origin.

[C] Museum visitors can still learn as much from artifacts' copies after the originals.

[D] Reproductions, even if perfectly mode, cannot take the place of the authentic

object.

[E] The real value of artifacts can only be recognized in their countries of origin rather than anywhere else.

[F] Ways to get artifacts from other countries must be decent and lawful.

[G] Concern over security is no excuse for refusing to return artifacts to their countries of origin.

Part C

Directions:

Read the following text carefully and then translate the underlined segments into Chinese. Write your answers on the ANSWER SHEET (10 points)

"Elephants never forget"-or so they-and that piece of folklore seems to have some foundation.

The African savanna elephants, also known as the Africa bush elephants, is distributed across 37 African counties. They move between a variety of habitats, including forests, grassland, woodlands, wetlands. (46) They sometimes travel more than sixty miles to find food or water, and are very good at working out where other elephants are-even when they are out of sight. What is more, they almost always seem to choose the nearest waterhole. (47) The researchers are convinced that the elephants always know precisely where they are in relation to all the resources the need. and can therefore take shortcuts, as well as following familiar routes.

Although the cues used by African elephants for long-distance navigation are not yet understood, smell may well play a part.

Elephants are very choosy eaters, but until recently little was known about how they selected their food. (48) One possibility was that they merely used their eves and tried out the plants they found, but that would probably result in a lot of wasted time and energy, not least because their eyesight is actually not very good.

(49) The volatile chemicals produced by plants can be carried a long way, and they are very characteristic: Each plant or tree has its own particular odor signature. What is more, they can be detected even where they are not actually visible. New research suggests that smell is a crucial factor in guiding elephants-and probably other herbivores-to the best food resources.

The researchers first established what kinds of plant the elephants preferred either to cat or avoid when foraging freely. They then set up a food station experiment, in

which they gave the elephants a series of choices based only on smell. (50) The experiment showed that elephants may well use smell to identify patches of trees that are good to eat. And secondly to assess the quality of the trees within each patch. Free-ranging elephants presumably also use this information to locate their preferred food.

Their well-developed hippocampal structures may enable elephants, like rats and people, to construct cognitive maps.

Section III Writing

Part A

51. Directions:

Read the following email from an international student and write a reply.

Dear Li Ming.

I've got a class assignment to make an oral report on an ancient Chinese scientist, but I'm not sure how to prepare for it. Can you give me some advice? Thank you for your help.

Yours.
Paul

Write your answer in about 100 words on the ANSWER SHEET.
Do not use your own name in the letter. Use“Li Ming”instead. (10 points)

Part B

52. Directions:

Write an essay based on the picture below. In your essay. you should
1) describe the picture and the chart briefly.
2) interpret the implied meaning. and
3) give your comments.
Write your answer in 160-200 words on the ANSWER SHEET. (20 points)
